

## **ITOP 2-2-509(1)**

### ***TRACKED VEHICLE RELIABILITY, AVAILABILITY, AND MAINTAINABILITY***

#### **SCOPE**

This document describes procedures for collecting and reporting reliability, availability, and maintainability (RAM) data during endurance testing of tracked vehicles. The main emphasis of this document is hardware-related reliability, availability, and maintainability as addressed in NATO STANAF 4158. Operational-related incidents resulting from operator errors or accidents do not enter into the hardware reliability calculation, however, the data would be available for evaluation if required.
