

ITOP 3-2-803

VISUAL INSPECTION OF CANNON BORES

SCOPE

This ITOP describes the inspection techniques and equipment used for detecting, observing, and recording changes in the condition of cannon bores. It covers closed circuit television (CCTV) and telescopic borescope systems, video tape and photographic recording methods, and techniques for making impressions and casts of the bore. Schedules and procedures for measurements and inspections of gun tubes are contained in ITOP 3-2-802.
