

## **ITOP 6-2-020**

### ***RADAR ANTENNA TESTS***

#### **SCOPE**

This ITOP outlines the test methods used in ascertaining the critical performance characteristics of radar antennas. The measurements are taken in the far field or in a compact range. The test methods serve as a guide to determine the overall technical characteristics of radar antenna systems. Notwithstanding the accuracies, frequencies and levels stated in this ITOP, the specific equipment requirements stated in the appropriate equipment specifications must be used.
