

RSA-MIL-TOP-35

ERGONOMIC EVALUATION OF MILITARY SYSTEMS; TEST OPERATION PROCEDURE FOR

SCOPE

This RSA-MIL-TOP is intended to be used for the Ergonomic assessment (evaluation) of all types of military materiel and systems tested by Ergotech. It encompasses the ergonomic procedures for the testing of design, functional performance and environmental considerations for the major test functions applicable to the ergonomic assessment. This document provides guidance on how to plan and conduct an ergonomic test and also includes specific test procedures. The contents of this document do not include detailed methods for statistical analysis of data.
